

20

Critical Security Controls

for Effective Cyber Defense

The **20 Critical Controls** enable cost-effective computer and network defense, making the process measurable, scalable, and reliable throughout the U.S. government, in the defense industrial base, and in other organizations that have important information and systems to protect. It is based on actual threats. The controls were selected by a consensus of the major U.S. government organizations that defend against cyber attacks as the controls that are most critical for stopping known attacks. Only one other security framework is based on threat – The Strategies to Mitigate Targeted Cyber Intrusions published by the Australian Defence Signals Directorate – which are also presented here.

The 20 Critical Controls prioritize the less threat-related catalog of guidelines published by the U.S. National Institutes of Standards and Technology (NIST) in Special Publication 800-53. This poster offers a snapshot of the purpose and main features of each of the 20 Critical Controls, shows the NSA ratings of each control based on how well it accomplishes attack mitigation, where it fits in the overall hierarchy of required controls, and the level of technical maturity that has been reached in implementing the control. The poster also maps the 20 Critical Controls to the Australian Defence Signals Directorate's Strategies to Mitigate Targeted Cyber Intrusions and the NIST Special Publication 800-53, Revision 3, Priority 1 Controls.

You'll find the up-to-date 20 Critical Controls, Version 3 document posted at: www.sans.org/critical-security-controls

And the Strategies to Mitigate Targeted Cyber Intrusions posted at: www.dsd.gov.au/infosec/top35mitigationstrategies.htm

UK Centre for the Protection of National Infrastructure (CPNI) is developing advice to support the 20 Critical Controls www.cpni.gov.uk/advice/infosec

NSA's Attack Mitigation View Of The 20 Critical Controls

The National Security Agency categorized the 20 Critical Controls both by their attack mitigation impact and by their importance.

Categories of Attack Mitigation

Reconnaissance	Get In	Step In	Exploit
Hardware Inventory (CA2.1)	Secure Configuration (CA5)	Audit Monitoring (CA6.9)	Security Skills & Training (CA9.9)
Software Inventory (CA2.2)	Secure Configuration (CA5.1)	Boundary Defense (CA6.13)	Data Recovery (CA9.1)
Continuous Patch Access (CA4.1)	Application Security (CA6.4)	Wireless (CA6.1)	Data Loss Prevention (CA9.17)
Networks Engineering (CA4.10)	Wireless (CA6.1)	Confidential Access (CA6.10)	Incident Response (CA9.18)
Penetration Testing (CA4.20)	Malware Defense (CA5.11)	Penetration Testing (CA6.10)	Incident Response (CA9.18)
	Limit User (CA6.11)		

Ranking by Importance: In order for a critical control to be a priority, it must provide a direct defense against attacks. Controls that mitigate known attacks a wide variety of attacks; attacks only in the compromise cycle; and the impact of a successful attack will have priority over other controls. Special consideration will be given to controls that help mitigate attacks that we haven't discovered yet.

VERY HIGH	HIGH	MEDIUM	LOW
These controls address operational limitations that are not anticipated and are not expected to be anticipated.	These controls address known threats that are anticipated and are not expected to be anticipated.	These controls address threats that are anticipated and are not expected to be anticipated.	These controls address threats that are anticipated and are not expected to be anticipated.

Proof Of Value In Automating The 20 Critical Controls

Automating the critical controls provides daily, authoritative data on the readiness of computers to withstand attack as well as prioritized action lists for system administrators to maintain high levels of security. At the same time, it eliminates the massive financial waste associated with thick audit reports that are out-of-date long before they are published. But such claims need proof.

At the U.S. State Department, we see the first agency-wide implementation of automated security monitoring with unitary scoring giving system administrators unambiguous information on the most important security actions that need to be implemented every day. And the results are in:

In the first year the risk score for hundreds of thousands of computers across the State Department dropped by nearly 90% while those of other federal agencies hardly changed at all. (Chart 1) And the risk reduction continues to today. As importantly, when a major new threat arose, the State Department was able to get 90% of its systems patched in 10 days (Chart 2) while other agencies, without automation and scoring and synchroin prioritization, got between 20% and 65% of their systems patched in several months.

20 Critical Security Controls		National Security Agency Assessment of the 20 Critical Controls			The Australian Government's Strategies to Mitigate Targeted Cyber Intrusions		Associated NIST Special Publication 800-53, Revision 3, Priority 1 Controls
Critical Security Control	Critical Security Control Description	Ter	Attack Mitigation	Dependencies	Technical Maturity	Ranking	Description
1 Inventory of Authorized and Unauthorized Devices	Reduce the ability of attackers to find and exploit unauthorized and unprotected systems. Use active monitoring and configuration management to maintain an up-to-date inventory of devices connected to the enterprise network, including servers, workstations, laptops, and remote devices.	1	Very High	Foundational	High	1	CM 8 (A, C, E, 2, 4) PM 5 PM 6
2 Inventory of Authorized and Unauthorized Software	Identify vulnerable or malicious software to mitigate or root out attacks. Develop a list of authorized software for each type of system and deploy tools to track software installed (including type, version, and patching) and monitor for unauthorized or unnecessary software.	1	Very High	Foundational	High	2	CM 1 - CM 2 (2, 4, 5) - CM 3 CM 5 (2, 7) - CM 7 (1, 3) CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
3 Secure Configurations for Hardware & Software on Laptops, Workstations, and Servers	Prevent attackers from exploiting services and settings that allow easy access through networks and browsers. Build a secure image that is used for all new systems deployed to the enterprise, host these standard images in secure storage areas, regularly validate and update these configurations, and track system images in a configuration management system.	1a	Very High	Capability	High	3	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 4) CM 9 (1) - SA 1 (6) SA 4 (2) - SA 7 (3) PM 6
4 Continuous Vulnerability Assessment and Remediation	Proactively identify and repair software vulnerabilities reported by security researchers or vendors. Regularly run automated vulnerability scanning tools against all systems and quickly remediate any vulnerability, with critical problems fixed within 48 hours.	1a	Very High	Capability	High	4	RA 2 (3, 4, 6, 8) RA 5 (3, 4, 5, 6) SC 1 (1) - SC 2 (4) SC 2 (5) - SC 2 (6) SC 2 (7) - SC 2 (8) SC 2 (9) - SC 2 (10) SC 2 (11) - SC 2 (12) SC 2 (13) - SC 2 (14) SC 2 (15) - SC 2 (16) SC 2 (17) - SC 2 (18) SC 2 (19) - SC 2 (20) SC 2 (21) - SC 2 (22) SC 2 (23) - SC 2 (24) SC 2 (25) - SC 2 (26) SC 2 (27) - SC 2 (28) SC 2 (29) - SC 2 (30) SC 2 (31) - SC 2 (32) SC 2 (33) - SC 2 (34) SC 2 (35) - SC 2 (36) SC 2 (37) - SC 2 (38) SC 2 (39) - SC 2 (40) SC 2 (41) - SC 2 (42) SC 2 (43) - SC 2 (44) SC 2 (45) - SC 2 (46) SC 2 (47) - SC 2 (48) SC 2 (49) - SC 2 (50) SC 2 (51) - SC 2 (52) SC 2 (53) - SC 2 (54) SC 2 (55) - SC 2 (56) SC 2 (57) - SC 2 (58) SC 2 (59) - SC 2 (60) SC 2 (61) - SC 2 (62) SC 2 (63) - SC 2 (64) SC 2 (65) - SC 2 (66) SC 2 (67) - SC 2 (68) SC 2 (69) - SC 2 (70) SC 2 (71) - SC 2 (72) SC 2 (73) - SC 2 (74) SC 2 (75) - SC 2 (76) SC 2 (77) - SC 2 (78) SC 2 (79) - SC 2 (80) SC 2 (81) - SC 2 (82) SC 2 (83) - SC 2 (84) SC 2 (85) - SC 2 (86) SC 2 (87) - SC 2 (88) SC 2 (89) - SC 2 (90) SC 2 (91) - SC 2 (92) SC 2 (93) - SC 2 (94) SC 2 (95) - SC 2 (96) SC 2 (97) - SC 2 (98) SC 2 (99) - SC 2 (100)
5 Malware Defenses	Block malicious code from tampering with system settings or contents, capturing sensitive data, or spreading. Use advanced malware protection to detect and prevent malicious code from spreading and blocking network devices. Automatically update each anti-malware tool on all machines on a daily basis. Prevent network devices from using auto-run programs to access removable media.	1a	High/Medium	Capability	High/Medium	5	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
6 Application Software Security	Neutralize vulnerabilities in web-based and other application software. Carefully test internally developed and third-party application software for security flaws, including coding errors and malware. Deploy web application firewalls that inspect all traffic, and explicitly check for errors in all user input (including file name and data type).	2	High	Capability	Medium	6	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
7 Wireless Device Control	Protect the security perimeter against unauthorized wireless access. Allow wireless devices to connect to the network only if it matches an authorized configuration and security profile and has a documented owner and defined business need. Enforce that all wireless access points are manageable using enterprise management tools. Configure scanning tools to detect wireless access points.	2	High	Capability	Medium	7	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
8 Data Recovery Capability	Minimize the damage from an attack. Implement a business continuity plan for restoring all data of an attack. Automatically back up all systems at least weekly. Back up sensitive systems more often. Regularly test the restoration process.	2	Medium	Capability	Medium	8	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
9 Security Skills Assessment and Appropriate Training to Fill Gaps	Identify knowledge gaps, and fill them with exercises and training. Develop a security skills assessment program, map training against the skills required for each job, and use the results to allocate resources effectively to improve security practice.	2	Medium	Capability	Medium	9	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
10 Secure Configurations for Network Devices such as Firewalls, Routers, and Switches	Preclude electronic threats from forming at connection points with the Internet, other organizations, and internal network segments. Configure firewall, router, and switch configurations against standards for each type of network device. Ensure that any deviations from standard configurations are documented and approved and that any temporary deviations are confined within the business need dates.	3	High/Medium	Capability/Dependent	Medium/Low	10	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
11 Limitation and Control of Network Ports, Protocols, and Services	Allow remote access only to legitimate users and services. Apply host-based firewalls and port filtering and scanning tools to block traffic that is not explicitly allowed. Properly configure web servers, mail servers, file and print servers, and domain name servers (DNS) servers to limit remote access. Disable automatic discovery of secondary systems components. Monitor servers inside the firewall using remote access is required for business purposes.	3	High/Medium	Capability/Dependent	Medium/Low	11	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
12 Controlled Use of Administrative Privileges	Protect and validate administrative accounts on desktops, laptops, and servers to prevent two common types of attacks: 1) installing users to bypass anti-virus, email, anti-spam, or file server security mechanisms and 2) creating an administrative password and thereby gaining access to a target machine. Use robust passwords that comply with NIST Special Publication 800-63B standards.	4	High/Medium	Dependent	Medium	12	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
13 Boundary Defense	Control the flow of traffic through network borders, and police content by looking for attacks and evidence of compromised machines. Establish multi-layered boundary defenses by relying on firewalls, proxy servers, demilitarized zone (DMZ) perimeter networks, and other network-based tools. Filter inbound and outbound traffic, including through business partner networks ("business").	4	High/Medium	Dependent	Medium/Low	13	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
14 Maintenance, Monitoring, and Analysis of Security Audit Logs	Use detailed logs to identify and assess the details of an attack, including the location, malicious software deployed, and activity on victim machines. Generate standard logs for each hardware device and the software installed on it, including data, time stamp, source address, destination address, and other information. About each packet and/or transaction. Store logs in dedicated servers, and run security reports to identify and document anomalies.	4	Medium	Dependent	Medium	14	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
15 Controlled Access Based on the Need to Know	Prevent attackers from gaining access to highly sensitive data. Carefully identify and separate critical data from information that is readily available to network users. Establish a robust data classification system based on the impact of any data exposure, and ensure that only authorized users have access to resolvable data and files.	4	Medium	Dependent	Medium/Low	15	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
16 Account Monitoring and Control	Keep attackers from impersonating legitimate users. Review all system accounts and disable any that are not associated with business processes and control. Immediately revoke system access for terminated employees or contractors. Disable dormant accounts and encrypt and isolate any files associated with such accounts. Use robust passwords that conform to NIST standards.	4	Medium	Dependent	Medium/Low	16	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
17 Data Loss Prevention	Stop unauthorized transfer of sensitive data through network attacks and physical thefts. Scrutinize the movement of data across network boundaries, both electronically and physically, to minimize the exposure to attackers. Monitor people, processes, and systems using a centralized management framework.	5	Medium/Low	Dependent	Low	17	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
18 Incident Response Capability	Protect the organization's reputation, as well as its information. Develop an incident response plan with clearly defined roles and responsibilities for quickly discovering an attack and then effectively containing the damage, eradicating the attacker's presence, and restoring the integrity of the network and systems.	5	Medium	Dependent	Low	18	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
19 Secure Network Engineering	Keep your network design from enabling attackers. Use a robust, secure network engineering process to prevent security controls from being undermined. Deploy a network architecture with at least three tiers: DMZ, middle-tier, private network. Allow rapid deployment of new access controls to quickly deflect attacks.	6	Low	Indirect	Low	19	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6
20 Penetration Tests and Red Team Exercises	Use simulated attacks to improve organizational readiness. Conduct regular internal and external penetration tests. The intent of an attack is to identify vulnerabilities and gauge the potential damage. Use parallel red team exercises – all test attempts to gain access to critical data and systems – to test existing defenses and response capabilities.	6	Low	Indirect	Medium/Low	20	CM 1 - CM 2 (1, 2) CM 3 (2, 4, 5, 6, 7, 8) CM 5 (2) - CM 8 (1, 2, 3, 4, 6) - CM 9 PM 5 PM 6

NSA identifies these 20 controls as having special value for immediate implementation in organizations that have not yet implemented more complete defenses.
